AMBITEX®

The hand protection trusted by professionals everywhere.

Professionals like you have trusted the AMBITEX® name as a symbol of consistency and value for over 30 years. As one of the nation's leading brands of hand protection, AMBITEX® products are stocked by leading distributors and trusted by the most prominent end users across a variety of markets.

Protecting you and those you serve is a responsibility we take very seriously.

Uncompromising Quality

AMBITEX® products are manufactured in professional, ISO certified and third-party audited manufacturing facilities. All products are manufactured to meet or exceed applicable industry standards and regulatory requirements, including ASTM, CE and FDA.

Peace of Mind

AMBITEX® products are protected from tampering by a C-TPAT certified supply chain. The designation, bestowed by the U.S. Department of Homeland Security, ensures adequate security safeguards from raw material to delivery.

CHOOSING THE RIGHT GLOVE

Latex Allergy

Latex allergy results from proteins contained in natural rubber latex. Exposure to latex proteins is possible via skin contact or inhalation, with the latter most commonly occurring when donning powder, containing proteins which have leached to the cornstarch, becomes airborne when changing gloves.

Estimates suggest only about 2% of the population experiences latex allergy symptoms, but those regularly exposed are at the greatest risk for a reaction. Synthetic gloves, such as vinyl and nitrile, continue to gain popularity because they do not contain latex.

Latex Powder Free Exam

Lasting protection against biological contaminants

- Meets or exceeds ASTM and FDA examination glove standards

HAND CARE

Common causes of dermal reactions

- Climate and environmental factors.
- Use of harsh antimicrobial soaps, personal hand-care products not approved by an infection control professional, or highly fragranced commercial hand lotions.
- Reaction to either the glove's chemical formulation or to protein allergies in latex.
- Friction-related irritation from repeated donning and removal of multiple pairs of gloves.
- Skin occlusion and dryness or maceration due to prolonged wear.
- Chemical exposure due to glove failure.

Most dermal reactions are irritations or contact dermatitis and are treatable with improved hand hygiene, skin care and appropriate glove selection.

AMBITEX® XP N6201 Series

Blue Nitrile Powder Free

HW

CHOOSING THE RIGHT GLOVE

Cuff Styles

Knit wrist cuffs provide a snug fit and are ideal for keeping debris out.

Slip-on cuffs extend over wrist but offer a loose fit for faster/easier donning.

Glove Material

Cotton is naturally hypoallergenic, durable, breathable and soft. Polyester is resistant to shrinking, stretching, sunlight and mildew. When combined with cotton, the mix provides an extra measure of durability and strength. Nylon is a lightweight synthetic polymer providing a silk-like feeling and texture. It is resilient, easy to care for and resists fungi and mildew.
